

ABSTRACT OF THE DISCLOSURE

A hand-thrown toy parachute has a canopy. A hollow stick
is suspended from the canopy by a plurality of rigging lines
substantially at the center of the canopy. A weight is enclosed
5 in the hollow stick to be movable back and forth in the
longitudinal direction of the stick under its gravity, and a
guide line is connected to the top of the hollow stick at its
one end and to the center of the canopy at its the other end.
